

Lily Collins Sparks Concern Over Frail Look at NYFW

Published on 17 Sep 2025 | By IFI Correspondent

Lily Collins attended Calvin Klein's show during New York Fashion Week. She appeared in a pearlescent sequin co-ord set.

While fans praised the glam ensemble, many began questioning her health. They pointed to how frail she seemed.

The Look: Glamorous Yet Minimalist

Collins wore a cropped camisole style top with thin "noodle" straps. It revealed her midriff, abs, and flat stomach. She paired it with a matching midi skirt, and thus maintained a clean silhouette. Her footwear included metallic stilettos; the clutch was white.

Her hairstyle matched the look: a sleek bob that emphasized her facial features. Overall, the outfit balanced glam and simplicity. [Hindustan Times](#)

Defence & Perspective: Beyond the Surface

Supporters reminded critics that Lily seems healthy in many ways. For instance, she walked on heels, styled well, maintained radiant skin and hair.

Moreover, they underscored that everybody's body is different; gaining weight is not always possible for some naturally. Besides, they asked viewers to separate performance and appearance. After all, fashion shows are curated, and lighting, angles, clothing affect perception.

Fashion Context: Trends & Consequences

NYFW often showcases avant-garde, striking styles. Outfits like co-ord sets with minimal coverage are common. At the same time, fashion photography and runway lighting can exaggerate slimness. Many designers and editors understand this impact.

Thus, while the outfit reads as glamorous, its presentation might contribute to unease among viewers. It shows how style decisions carry weight beyond surface glamor.
